Lighting Res. Technol. 19(4) 121 (1987) Printed in Great Britain

Contents list

Volume 19, 1987

A physiological phenomenon and its implications for lighting design	M J Perry, F W Campbell and S E Rothwell	1
Improving the spectral characteristics of fluorescent lamps by using narrow-band phosphors	X H Zhou, T M Zhou and Y C Lu	7
Daylight availability and lighting use: Geographical variations	S M Secker and P J Littlefair	25
Visibility at a tunnel entrance: Effect of temporal adaptation	C Bourdy, A Chiron, C Cottin and A Monot	35
Monitoring occupancy and light operation	M S Rea and R R Jaekel	45
'Energy limiters': Their place in lighting control	D F Chapman, A I Slater and A L Isaacs	53
Legibility of texts: The influence of blur	E M Colombo, C F Kirschbaum and M Raitelli	61
Adaptation luminance when approaching a tunnel in daytime	W K Adrian	73
The effectiveness of light switch reminders in reducing light usage	M S Rea, R F Dillon and A W Levy	81
Spectral distribution of light sources: New optimisation criterion	W Stanioch	89
Control measurements of road lighting	P Gordon	97
On time to see	M S Rea, P R Boyce and M J Ouellette	101
Luminance pattern simulation: Design of an artificial BRE Average Sky	S P Stupple, J A Lynes and P J Littlefair	105

Research Notes

Subdivision of the sky hemisphere for luminance measurements	P R Tregenza	13
Constraints on reflectance in artificial sky domes	P J Littlefair, J A Lynes and S P Stupple	115
CIBSE Lighting Division Chairman's Address 1985/6	J A M Bell	15
Abstracts		21, 51, 87, 119
Obituary		24
Erratum		52
